In a local Berlin meeting of technicians under the auspices of the Kammer der Technik several technicians from the Radio-und Fernmeldetechnik VVB talked

25X1A

In addition to its work on magnetophones the RFT is working on a type of light record player (Lichtgrammophon) similarly to the design recently offered by Herry Mihaly (film on ozaphan basis with ten sound tracks). Apparently it is intended to use a Moeglich cell (cadmium sulphide cell). RFT believes that the cell will have a big future in RR signal equipment. The East German RR is supposed to be interested. Another field of use is in color meters. New experiments show that the cell can be used for X-Ray dosimeters. One man reported that the cell was reacting excellently to radium radiation.

25X1A

Comment: It should be understood that these are the comments of rather low-grade technicians.
